

Workplace Safety Award 2023

New Critical Risk Framework

EEA Health & Safety Conference October 2023

Unison Overview

- NETWORK AREA
-  **unison**
The Powerlines People
-  **unison contracting**
-  **unison fibre**
Connecting People and Business
-  **unison contracting**

2

What was the issue?

- Dynamic industry, multiple operations & working environments
- Large number of health and safety risks
- Out of date hazard/risk registers for Unison companies – last reviewed 2016
 - Missing:
 - New depot (Dunedin)
 - Changes to operations, tasks, plant and equipment
 - Network staff activities in the field
 - Outcomes from formal event investigations, safety alerts, changes to HSMS
- Unison company risk registers (Fibre, Network, Contracting Company) – managed separately
- Risk to the health and safety of our workers from unknown, unmanaged and/or uncontrolled risks due to outdated & unaligned risk registers
- January 2020 – project commenced to review Unison Risk Register (2-year project):
 - HSR's & operational reps/leaders, subject matter experts,
 - On site and off site (field) activities & workplaces,
 - Contracting & network companies worked collaboratively,
 - Started with the contracting and fibre companies,

Project Outcomes – Risk Assessments (New & Existing Reviewed)

Residual Risk Ratings – Company Risk Matrix

Workplace Injury and/or Occupational Health Illness		RISK SEVERITY (CONSEQUENCES)					
		Insignificant	Minor	Moderate	Major	Catastrophic	
		Slight pain and/or discomfort	Superficial injury/illness that may need first aid treatment or medical assessment	Injury/illness causing temporary disability including reversible health effects. May need medical treatment and/or alternative work duties or lost time	Serious harm injury or illness causing permanent partial or temporary severe disability	Fatality or serious injury/illness causing permanent disability including irreversible health effects	
		5	4	3	2	1	
RISK PROBABILITY (LIKELIHOOD)	Almost Certain: Is expected to occur in most circumstances	A	Low	Medium	High	Extreme	Extreme
	Likely: Will probably occur in most circumstances	B	Low	Medium	High	Extreme	Extreme
	Possible: Might occur in most circumstances	C	Low	Medium	High	High	Extreme
	Unlikely: Could occur in some circumstances	D	Very Low	Low	Medium	High	Extreme
	Rare: Practically impossible may occur only in exceptional circumstances	E	Very Low	Low	Medium	Medium	High

110

86

6

6 High Residual Risk Activities

- Live HV glove and barrier/hot stick work
- Driving vehicles
- Working on or near roads
- Helicopter operations
- Working in zone substations
- Equipment Room (Fire suppressant system)

Escalate to Group CEO

- Very high risk – action plan required – additional controls to be implemented
- Group CEO manages risk

Critical Risk Tier Structure

Tier 1 = With controls in place, consequence could be catastrophic, but the likelihood is rare

Tier 2 = With controls in place, consequence is not catastrophic

- Critical risk pictorials
 - Visually engaging, 1 for each critical risk, Unison colours (differentiating between tier 1 & 2 with colour inversion)
 - Used consistently to any material referring to critical risks
 - Developed in consultation with HSR's

		RISK SEVERITY (CONSEQUENCES)

Formalise Unison Critical Risks & Critical Risk Activities

- Opportunity reassess & improve the way workplace health & safety risks are understood, managed & prevented at Unison = critical risk-based approach
- Focus our energy on risks that could result in catastrophic event if not controlled or managed – as opposed to trying to manage every risk (even those that cause minor injury or illness)
- More proactive, systemic, streamlined approach across the Unison companies – bring alignment with compliance as a consequence
- Embed a critical risk framework between network, fibre and contracting Unison companies
- EEA Draft Critical Risks Guide - alignment
- Focus risks with:
 - Catastrophic (extreme) inherent risk rating
 - High residual risk rating

Tier 1 Critical Risks

Accidental contact with live electricity

Worker struck by vehicle, plant, object

Network asset failure

Vehicle impact with another vehicle

Plant or equipment malfunction

Tier 2 Critical Risks

Fall from height

Worker trapped by the collapse of a trench or excavation

Hazardous atmosphere

Personal safety and wellbeing

Hazardous substances

Unison aligned critical risk framework

Differences being:

- 'Hazardous Atmosphere' is Tier 1 critical risk for UNL (Network) – Tier 2 UCSL (Contractor)
- 'Accidental contact with Electricity' is Tier 1 critical risk for UCSL (contractor) – Tier 2 for UNL (Network)

Plan – HSMS Implementation & Comms

Plan – HSMS Implementation & Comms

HSMS ELEMENT

Induction, Training, Supervision, Competency

- Update induction programmes
- Review compliance training effectiveness – critical controls
- Internal online critical risk training module

Event Management

- Link all events (near misses, injuries, illnesses, incidents) to critical risks
- Event associated with critical risk = HPI/ICAM investigation
- Update basic & formal investigation process

Contractor Management

- Update pre-qualification process
- Assess contractors based on critical risk activities – frequency audits
- Update induction programme
- Comms plan

Example

Hazardous Atmosphere		Tier One		Tier Two	
	Risk Activities	1		2	
	% Hard Controls	30%		32%	
	% Soft Controls	70%		68%	
		Month	YTD	Month	YTD
	Near Miss	0	0	0	0
	Field Audits	0	0	0	0
	Risk Reviews	0	0	0	2
	New Controls	0	0	0	0
	Non Conformances (Control Failures)	0	0	0	0

Hazardous Substances		Tier Two	
	Risk Activities	5	
	% Hard Controls	14%	
	% Soft Controls	86%	
		Month	YTD
	Near Miss	3	4
	Field Audits	0	1
	Risk Reviews	0	1
	New Controls	0	0
	Non Conformances (Control Failures)	0	0

Example of HPI's linked to critical risks

High Potential incidents	9	Helicopter weight made contact with MEWP bucket during wire stringing operation	
		Neutral not connected at a property (unsafe livening)	
		Traffic management contractor worker vehicle accident on motorway	
		Crane truck rolled backwards and made contact with MEWP (worker inside bucket)	
		11kV cable strike with a reciprocating saw while removing cable protective covering.	
		Applied pothead earth to live HV pothead	
		UCSL truck and trailer vehicle accident resulting in the trailer carrying a digger to tip over	
		UCSL truck made contact with a pole causing movement along the OH conductors a HV live line team were working on (binding in conductor) at the time	
		Earths applied without permission or permit during a car v pole fault situation	

Example of monthly critical risk reporting to the board

Formal Deep Dive Risk Assessments

Tier 1 = Critical Risk Activities

Using 'Bow Tie' risk assessment method to identify and confirm:

- The top event(s) that could be a catastrophic event (although rare)
- That all hazards/threats have been identified
- Critical controls crucial to prevent Tier 1 events from occurring
- Critical detective and recovery controls
- Effectiveness of the critical controls and if they need improvement
- Whether the critical controls are being verified, monitored, or measured

The deep dive risk assessments confirmed, in particular, the critical controls, critical control owners and how each critical control is or will be verified.

Example - Helicopter Operations

19

November 2021 –
Remote hook released
a pole without action
from pilot or
groundcrew resulting
in the pole dropping
approximate 10 metres
above ground –
workers in proximity

Helicopter drop line weight struck EWP bucket

Tier 1 Critical Risk: "Plant or Equipment Malfunction"

Critical Risk Activity: "Helicopter Operations"

Region: Hawke's Bay

Due to silt build up and debris left behind following Cyclone Gabrielle, the safest and most efficient method for restringing some overhead feeders during the cyclone restoration was by using a helicopter to pull conductor between poles.

The use of a helicopter for restringing overhead lines is well practised by the Hastings UCSSL crews. The helicopter down line used to pull the conductor is weighted to counter the swing of the drop line. This makes it easier for the pilot to control the line and conductor when in the air. The weight is approximately 80kg.

During an 11KV conductor restringing operation, which ran alongside Dartmoor Road, an incident occurred where the suspended weight at the end of the drop line from the helicopter contacted the bucket of an elevated work platform (EWP). This was classified as a high potential incident as using a helicopter is a tier one critical risk. No workers were injured nor were the EWP or helicopter damaged.

There is an ICAM investigation underway to determine the root cause of the event, but preliminary findings are that the braking system on the conductor drum, used to keep tension on the conductor during the stringing operation, may have partially released allowing the conductor to run free as the helicopter was preparing to hand-off the conductor to the EWP operator. This release in tension on the conductor allowed the weight to swing down and into the EWP bucket.

Link Critical Risk Framework Field – Worksite Safety Plan Process

An example of a completed Unison worksite Safety Plan showing consideration of critical risks

Outcomes

Statistically, health and safety at Unison has improved significantly since the development of the risk registers and introduction of the Critical Risk Framework:

*Permanent (Class 1) Total/partial impairment > 6 months
 *Moderate (Class 2) Total/partial impairment - 2 weeks to 6 months

Outcomes

Statistically, health and safety at Unison has improved significantly since the development of the risk registers and introduction of the Critical Risk Framework:

Outcomes

Outcomes

Culturally, introduction of the framework has contributed to an organisation that is more aware of health and safety (including mental and physical wellbeing), and people who are more cognisant of the role they play in preventing and managing critical risks!

We have up-to-date health and safety risk registers we can confidently make use of to implement risk controls; influence content for worker inductions and training; assist with workplace field audits, tailor contractor/sub-contractor and visitor inductions and general health and safety development and awareness-raising.

We can quickly and easily identify any trends and target interventions, accordingly, ensuring efforts are directed to where they will have the most impact.

A horizontal bar with three segments: orange, dark blue, and yellow.

Questions

A large, light grey, stylized graphic consisting of several overlapping, curved, leaf-like shapes arranged in a circular pattern.
